

Sphinx is a tool that makes it easy to create intelligent and beautiful documentation, written by Georg Brandl and licensed under the BSD license. It was originally created for the Python documentation, and it has excellent facilities for the documentation of software projects in a range of languages.

Using Sphinx for Python Documentation

- 1) Workflow.
- 2) Prepare.
- 3) Step 1: Use sphinx-quickstart to generate Sphinx source directory with conf.py and index.rst.
- 4) Step 2: Configure the conf.py. ...
- 5) Step 3: Use sphinx-apidoc to generate reStructuredText files from source code.
- 6) Step 4: Edit index.rst and the generated reStructuredText files.
- 7) Step 5: Build the documents.
